consumption on the Island, the prospect is that the mining industry will add new strains on the load demand.

DEBT RULE APPEALED BY FATHER

MONTREAL (CP) — Paul J. Rodier of Montreal will today file an appeal on a court ruling that he must support and pay the debts of his 44-year-old unemployed son, a spokesman for the elder Rodier said Tuesday.

Mr. Justice Edouard Martel of Quebec Superior Court Monday ordered Mr. Rodier to pay his son Pierre a provisional monthly allowance of \$700 effective immediately, and to settle his son's debts.

He said it appears likely that several low-grade ore operations will be developing relatively soon on Vancouver Island and the recovery process involved uses large amounts of electricity.

“A rule of thumb for these low-grade operations is one kilowatt for each ton of production and Brenda Mines (which opened such an operation on the mainland recently) is rated at a production capacity of 24,000 tons per day which means it needs 24,000 kilowatts.

“There are several possibilities such as this apparently for the Island at this point and they will affect the load growth.”
